

Various

Contents Management System with High ROI development !

Realizing the development utilizing Multimedia Contents Management and Flexible DB structure !

Master Data Management

Mission-critical system master data management assuming the operation support of various master jurisdiction departments.

Introduction of Middleware *eBASE*

Development using Middleware *eBASE* !

Significant reduction in development cost ! Realizing the PaaS environment !

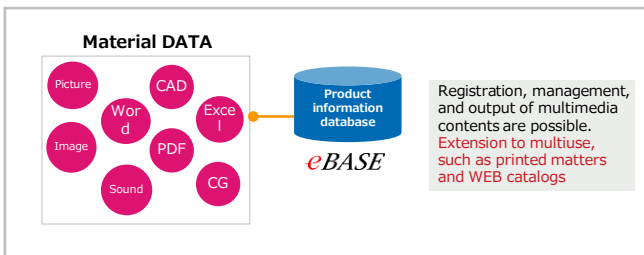

System development taking advantage of the characteristics of *eBASE*

Multimedia contents management function

eBASE as a contents management system

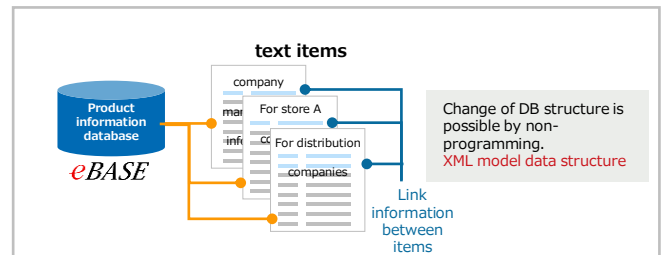

In eBASE, registration, management, and output are possible for all multimedia contents such as images, CAD, video, Office data.

Flexible database structure

Reduction of Development time

Construction, addition, and edit of DB structure are possible with non-programming. Reduction of initial system construction labor and delivery time can be realizable, and also the labor cost of DB structural change after the operation can be reduced.

Data base development platform "Middleware *eBASE*"

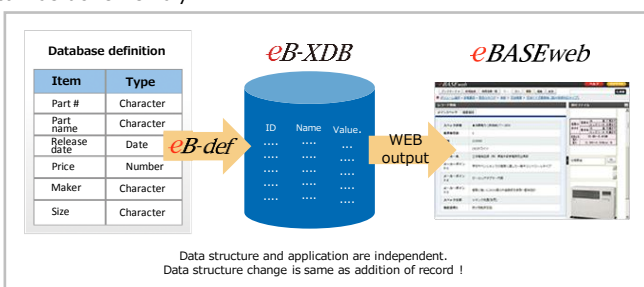

Database configuration featuring flexibility and high speed

The data base of Middleware eBASE consists of "eB-XDB" that can perform addition and deletion of data flexibly, and "eB-RDB" that realizes high-speed operation.

XDB structure is the standard database structure of eBASE similar to XML or KVS (Key Value Store).

eB-XDB

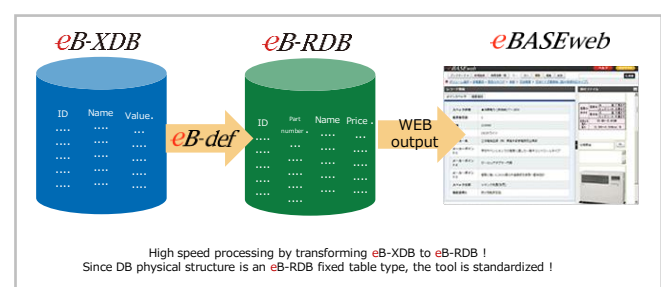

eB-XDB is the standard database structure of eBASE. The item name and the value are assigned to one record, and operations, such as addition, deletion, and change of items, can be done flexibly.

eB-RDB

An item is fixed by transforming the data base designed by eB-XDB to eB-RDB.

This operation makes it possible to process data at high speed.

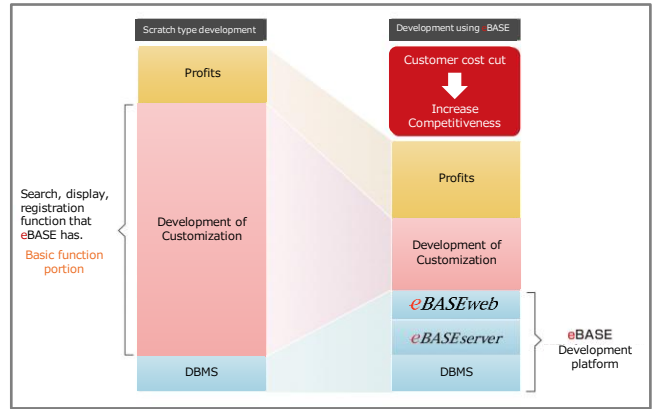

The reasons for adopting "Middleware *eBASE*"

Increase competitiveness from cost reduction

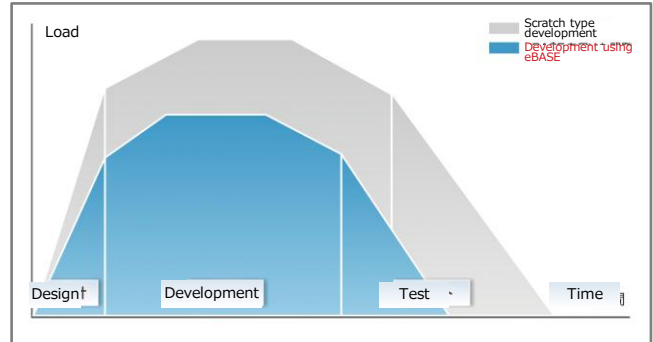

Drastic reduction of customization expenses is expected by adopting Middleware *eBASE* as development environment. Many of the parts that require customization in the database system development are included in *eBASE* as basic functions, and the development of that part can be greatly simplified.

Moreover, with 'eBASEweb for SmartPhone' you can use *eBASE* from mobile terminals with non-programming, and one-source multi-use development is possible.

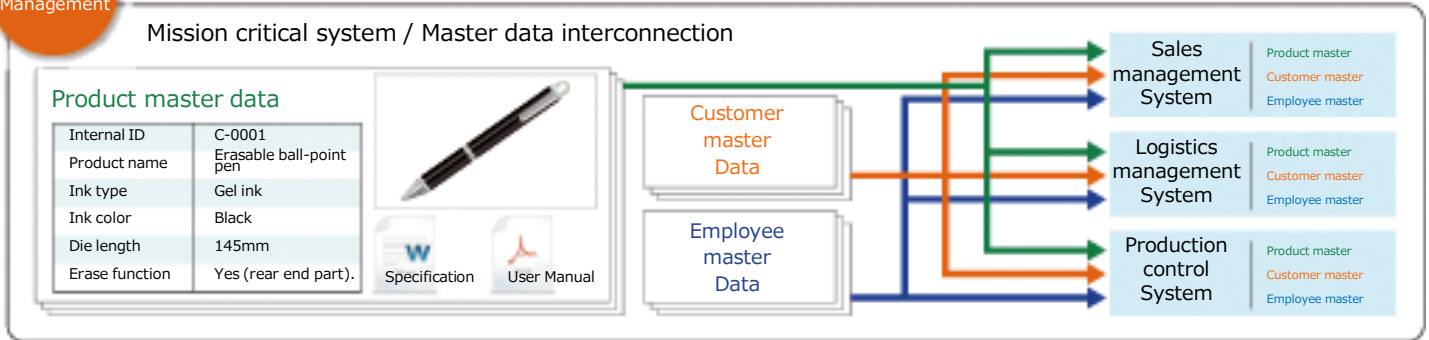

Reduction of development load

Middleware *eBASE* is available in the cloud or on-premises and does not limit the environment. Moreover, it is possible to develop on PaaS using *eBASE*. DB structure can be constructed and changed easily, and it is ideal for agile development site where rapidness is required.

MDM
Master Data
Management

Mission critical system / Master data interconnection

Human resource outsourcing services by *eBASE-PLUS*

IT specialists of *eBASE-PLUS* respond to a wide range of demand of various customers.

System solution

High quality, high added value IT services by IT specialists

We support a wide range of technologies such as systems, platforms and databases, construction and development in the area, and high quality and high added value IT services.

Infrastructure construction / Software development /
Control and Embedded software development

IT management

Support stable operation of mission critical system

We operate and manage large-scale general-purpose machines, UNIX and PC servers by dedicated staff, on a full-time basis 24 hours a day, 365 days a year. We also offer a variety of outsourcing services to reduce the burden of customers in daily operational management tasks.

Operation management of mainframe computers
Outsourcing support

Support service

Reliable support by experts with "technical strength" and "service ability"

Our technical support staffs believe that the origin of service is not only technical skills but harmony of technical skills and sincere human nature. We focus on "training employees who can respond to changes in the times" and provide optimal support services that customers can be fully satisfied with.

Network security system configuration / Integrated operation management /
System introduction, development, and environmental construction / Help desks / Web site work / SAP R/3
